OMA2 Installation Quick Start Guide
Mac Version

1. Install Xcode. This is available for free from the App Store. Run the Xcode app to finish installation.

2. Get the latest version of OMA from github:

   https://github.com/mblong/oma2

   Choose *Clone or download->Download ZIP*

3. Expand the downloaded file, open the folder (oma2-oma2_threaded), then open the folder oma2.

4. Double click on oma2.xcodeproj. This should open the oma2 project in Xcode.

5. Run the oma2 project (type cmnd r or select *Product->Run* from the Xcode menu or click on the grey triangle in the upper left corner of the oma2 project window).

6. This will compile and run oma2. There will be numerous warnings, none of which are critical. This should also copy the oma2 app to your applications folder; in the future you can run the program from there. To update to the latest version, just start back at Step 2.
